

## Medtronic Receives FDA Clearance for Riptide(TM) Aspiration System

January 16, 2018 9:00 AM CT

*New System Expands Neurovascular Product Portfolio  
for the Treatment of Acute Ischemic Stroke*

**DUBLIN - January 16, 2018** - Medtronic plc (NYSE:MDT) today announced that the company's Neurovascular business unit received U.S. Food and Drug Administration (FDA) clearance of the Riptide(TM) Aspiration System, adding a valuable tool to the Acute Ischemic Stroke (AIS) product portfolio.

The Riptide Aspiration System is designed to retrieve thrombus (or blood clot) through the Arc(TM) Catheter and restore blood flow in patients experiencing blockage of an artery in the brain, known as an ischemic stroke. The procedure involves inserting a catheter through an incision in the leg and up to the blocked artery allowing the physician to remove the blood clot.

The Riptide Aspiration System is intended for use in the revascularization of patients with acute ischemic stroke secondary to intracranial large vessel occlusive disease (within the internal carotid, middle cerebral - M1 and M2 segments, basilar and vertebral arteries) within eight (8) hours of symptom onset. Patients who are ineligible for intravenous tissue plasminogen activator (IV t-PA) or who fail IV t-PA therapy are candidates for treatment.

"While I primarily use the Solitaire(TM) Revascularization Device to treat patients with acute ischemic stroke, I utilize a direct aspiration approach as my first line treatment strategy in select circumstances such as basilar artery thromboembolism and in select anterior circulation cases," said Dr. Daniel Sahlein, interventional neuroradiologist, Goodman Campbell Brain and Spine, assistant professor of clinical neurology in the department of Neurological Surgery, Indianapolis University-Purdue University Indianapolis. "The Riptide Aspiration System will provide me with another proven Medtronic product to utilize when treating stroke patients."

The Riptide Aspiration System includes the Arc Catheter, RiptideAspiration Tubing, Riptide Aspiration Pump and RiptideCollection Canister with intermediate tubing. The Riptide Aspiration System is a foundational platform for future aspiration catheters, currently in development.

"Medtronic is committed to developing services and solutions that address healthcare needs by improving clinical and economic outcomes," said Stacey Pugh, vice president and general manager of Medtronic's Neurovascular business which is part of the Restorative Therapies Group. "We believe that the Riptide Aspiration System and SolitaireRevascularization Device provide our customers with a comprehensive suite of products to choose from. Medtronic is committed to being a complete solutions provider in the treatment of Acute Ischemic Stroke market."

According to the American Heart Association/American Stroke Association (AHA/ASA), stroke is the fifth leading cause of death in the U.S. and a leading cause of disability.<sup>1</sup> In June 2015, the AHA/ASA published new stroke treatment guidelines that recommended the use of stent retriever technology - such as the Solitaire stent retriever device - in conjunction with IV rtPA/alteplase as a first-line treatment for eligible patients.<sup>2</sup>

### **About Medtronic**
