

## **New Analyses Reinforce Hemodynamic Benefits of Medtronic Evolut(TM) TAVR Platform in Intermediate Risk Aortic Stenosis Patients**

October 31, 2017 9:00 AM CT

*Presented at TCT, Evolut TAVR Platform Showcases Positive Clinical Outcomes in Patients Wanting to Return to More Active Lives*

**DUBLIN and DENVER - October 31, 2017** - Medtronic plc (NYSE:MDT) today presented new clinical research to support the positive clinical performance of the Evolut(TM) Transcatheter Aortic Valve Replacement (TAVR) Platform in intermediate-risk, severe, symptomatic, aortic stenosis patients. Outcomes from the Surgical Replacement and Transcatheter Aortic Valve Implantation (SURTAVI) Trial and the Evolut R FORWARD "real-world" study were presented today at the Transcatheter Cardiovascular Therapeutics (TCT) Annual Meeting, reinforcing the valve's strong performance in healthier, more active patients.

### **New Insights from SURTAVI**

Complete one-year outcomes from the SURTAVI trial based on Kaplan-Meier analyses confirmed the strong performance of the CoreValve and Evolut R TAVR systems versus the gold standard of open heart surgery in an intermediate risk severe symptomatic aortic stenosis patient population. The results indicate that the platform continued to provide comparable results to surgery with regard to the primary combined endpoint of all-cause mortality or disabling stroke (7.8 percent for TAVR vs. 8.5 percent for surgery;  $p=0.55$ ) at one year. A subgroup analysis of the SURTAVI Continued Access Study (CAS) showed consistently positive safety data for the Evolut R System in intermediate risk patients with high rates of survival (100 percent) and low rates of all stroke (1.5 percent) or disabling stroke (0.4 percent) at 30-days.

"With its supra-annular and self-expanding design, the Evolut TAVR platform is well-suited to deliver excellent valve performance for intermediate risk patients who are often considered to be more active than high- or extreme-risk patients," said Nicolas M. Van Mieghem, M.D., director of interventional cardiology at Erasmus Medical Center in Rotterdam, the Netherlands, and presenter of the SURTAVI one-year data at the meeting. "As new clinical data are gathered for this patient population, we continue to see the exceptional clinical benefits this self-expanding valve provides as a minimally-invasive treatment alternative to surgery."

Additionally, a sub-analysis from the SURTAVI trial where patients were stratified based on their STS Predicted Risk of Mortality (PROM) showed that TAVR patients demonstrated a significantly lower rate of all-cause mortality or disabling stroke at one year (1.5 percent vs. 6.5 percent;  $p=0.04$ ) in the category of patients with STS-PROM < 3 percent. Patients treated with TAVR also showed mortality improvements across risk categories at one year whereas surgical mortality rates were similar across all STS score categories.

### **Evolut R FORWARD Study**

Similarly, results from a subset of 257 "real-world" patients enrolled in the Evolut R FORWARD Study with an STS PROM < 3 percent demonstrated excellent clinical outcomes with a low rate of all-cause mortality (2.0 percent) and disabling stroke (1.2 percent) at 30-days post implant.

"As we continue to build our growing body of evidence to support the Evolut TAVR platform in intermediate risk patients, the SURTAVI and FORWARD clinical programs further support our efforts to expand TAVR access to a broader patient population," said Pieter Kappetein, M.D., vice president, medical affairs for Structural Heart business, which is part of the Cardiac and Vascular Group at Medtronic. "We look forward to working with heart teams around the globe to continue our commitment to evaluating TAVR performance in healthier patients."

The CoreValve Evolut TAVR platform consists of the CoreValve, CoreValve Evolut R and the Evolut PRO systems, which

are available for use in the United States and Europe for severe aortic stenosis patients at an intermediate surgical risk or greater.

**About Medtronic**

Medtronic plc ([www.medtronic.com](http://www.medtronic.com)), headquartered in Dublin, Ireland, is among the world's largest medical technology, services and solutions companies - alleviating pain, restoring health and extending life for millions of people around the world. Medtronic employs more than 84,000 people worldwide, serving physicians, hospitals and patients in approximately 160 countries. The company is focused on collaborating with stakeholders around the world to take healthcare Further, Together.
