

Medtronic Launches New Solutions to Help Monitor Patients for COVID-19

March 27, 2020

New Offerings Available to Existing Medtronic Care Management Services Customers as well as New Hospital Systems, Health Plans and Employers

DUBLIN, March 27, 2020 (GLOBE NEWSWIRE) -- Medtronic plc (NYSE:MDT), the global leader in medical technology, today announced its [Medtronic Care Management Services \(MCMS\)](#) business is launching two new solutions designed to help assess, monitor, and triage support for patients who may be concerned about COVID-19 and their respiratory symptoms. It has already launched its new Respiratory Infectious Disease Health Check to existing MCMS customers, and it is now launching a new COVID-19 Virtual Care Evaluation and Monitoring solution available to U.S. health systems, health plans and employers.

"With the rapid spread of COVID-19, we know that alternative approaches to screening, disease monitoring, and patient education are urgently needed to reduce additional population exposure to the virus and ease the burden on health care providers and facilities. It's easy to understand why staying in self-quarantine and monitoring your own symptoms is challenging. Unless you consult a medical professional, it's hard to know when your symptoms warrant seeking medical care," said Sheri Dodd, vice president and general manager of MCMS. "Using technology for self-reported symptom monitoring may play an important role in slowing the spread of the disease and helping escalate patient needs to their provider when appropriate."

The [Respiratory Infectious Disease Health Check](#) for existing MCMS customers is an included add-on to all current care management programs. The Respiratory Infectious Disease Health Check helps patients with chronic, co-morbid health conditions who are at the highest risk for complications or mortality associated with COVID-19 track their respiratory infectious disease symptoms and body temperature through daily health checks. The program reacts dynamically during the health check to present symptom questions based on the patient's previous responses, and provides patient education to encourage and support self-care. Data is aggregated for clinician review and action if additional intervention is needed.

For health systems, health plans and other employers new to MCMS programs, the company is launching a stand-alone assessment and monitoring service. The [COVID-19 Virtual Care Evaluation and Monitoring solution](#) uses a virtual assistant to evaluate patients through a Centers for Disease Control and Prevention (CDC) guideline-based survey for COVID-19 symptoms. If the user's symptoms warrant it, the solution connects them to the MCMS nurse command center, where registered nurses review the patient's data and either identify recommendations or the need for additional care assessment, based on the CDC guidelines. This could include a recommendation to continue monitoring symptoms at home, or to contact a healthcare provider directly.

"True to the Medtronic Mission, the health and safety of our customers, their patients, and our employees remains our highest priority as we address this unprecedented outbreak," says John Liddicoat, M.D., executive vice president and president, Medtronic Americas Region. "Around the world, we are in ongoing communication with customers, suppliers, and governments to prioritize needs to the best of our ability. These solutions aim to help manage unnecessary exposures, minimize burden on the health care system, and escalate the most seriously ill patients for immediate care."

About Medtronic Care Management Services (MCMS)

Medtronic Care Management Services (www.medtronic.com/caremanagementservices) offers remote patient monitoring that uses a combination of care management services, patient engagement solutions, and data analytics and reporting. MCMS helps health plans, ACOs, IDNs, and home health agencies focus their care on at-risk patients with actionable insights. The business' remote patient monitoring solutions are designed to scale and integrated into customers' population health and care management efforts – covering the diverse needs of patients with complex, chronic, co-morbid health conditions.
